CONTENT REGULATION AND HUMAN RIGHTS

EXECUTIVE SUMMARY

OUR STARTING POINT

Principles of good governance and human rights impel governments to understand and address public and private harms within their jurisdiction. Since policymakers and regulators around the world are increasingly concerned about various forms of online content and conduct, it is no surprise that many are considering how different forms of state action may help or hinder efforts to address those concerns.

The multistakeholder Global Network Initiative (GNI) reviewed over a dozen recent initiatives that claim to address various forms of online harm related to user-generated content — a practice we refer to broadly as “content regulation.” We focused on proposals that could shift existing responsibilities and incentives related to user-generated content. Our analysis illustrates the ways that good governance and human rights principles provide time-tested guidance for how laws, regulations, and policy actions can be most appropriately and effectively designed and carried out. Because content regulation is primarily focused on and likely to impact digital

1. This brief includes analysis of many, but not all of the content regulation initiatives that GNI members have identified as noteworthy up until the brief went to print in mid-September 2020.
COMMUNICATION AND CONTENT, WE USE INTERNATIONAL HUMAN RIGHTS PRINCIPLES RELATED TO FREEDOM OF EXPRESSION AND PRIVACY AS OUR PRIMARY LENS.

These historically validated human rights principles can help lawmakers find creative and appropriate ways to engage stakeholders, design fit-for-purpose regulations, and mitigate unintended consequences. Governments that actively place human rights at the forefront of their deliberations and designs are not only less likely to infringe on their own hallowed commitments, they can also achieve more informed and effective outcomes, balancing public and private responsibilities, designing appropriate incentives, enhancing trust, and fostering innovation.

WHAT WE FOUND

Although there are important differences between the various content regulation efforts examined in this brief, many share certain key characteristics. By definition, such initiatives alter the balance of responsibilities in the information and communications technology (ICT) ecosystem, introducing a degree of legal uncertainty, which can shift user understanding and expectations, disrupt information value-chains, and risk unsettling the playing field for ICT companies of all sizes and business models. While this is not, in and of itself, a reason to refrain from regulation, few governments have demonstrated sufficient efforts to fully understand the social and economic impacts of such disruption.

Many content regulation efforts also require or otherwise strongly incentivize intermediaries to further rely on automated filtering systems to proactively identify illegal or otherwise inappropriate content or conduct, notwithstanding the fact that such systems, in their current state, may result in over-removal and increase the risk of self-censorship. Beyond this, a number of the initiatives reviewed would force intermediaries to rapidly adjudicate the legality or permissibility of third-party content on their services, creating unintended consequences and complicated implications for the rule of law, democratic process, accountability, and redress.

In addition, some of these initiatives implicitly or explicitly require tracing and/or attribution of content, raising significant privacy concerns. Lawmakers have been particularly challenged in their efforts to regulate private messaging services, many of which feature strong end-to-end encryption, which protects user content and security but can make content moderation by intermediaries challenging.

Finally, a number of these efforts apply more broadly than necessary. Some seek not only to address illegal expression more effectively, but also to regulate legal but harmful content. Others, whether explicitly or due to unclear or vague language, apply to
companies of varying sizes across various layers of the ICT sector, unnecessarily creating the potential for liability among companies that are not well positioned to effectively or proportionately address content. And yet others assert the authority to regulate content extraterritorially, and even globally, heedless of the implications for users’ rights in other jurisdictions and international comity.

**WHAT WE RECOMMEND**

In order to identify effective and proportionate approaches to content regulation, public authorities need to recognize that the ICT sector is perpetually evolving. Services that facilitate sharing of user-generated content differ in important ways, and the ICT sector features an ecosystem of interrelated components upon which multiple industries, initiatives, and possibilities depend. This complexity counsels careful consideration of what state actions are most appropriate and narrowly tailored to address which specific challenges. Lawmakers must be clear about the priorities that inform their efforts and open to diverse approaches to achieving them.

Fortunately, many actors agree on the need to address legitimate public policy concerns around harmful content and conduct online while respecting human rights. Many ICT companies have come to recognize the value of clear, publicly defined laws and obligations, while civil society actors continue to provide constructive and often prescient advice drawn from the real-world experiences of the most vulnerable and marginalized communities. Processes for legislative deliberation should therefore be open and non-adversarial, drawing on broad expertise to ensure results are well thought out and evidence based.Unelected regulatory or oversight bodies should also prioritize transparency and consultation with diverse constituencies.

Furthermore, while governments can and should learn from each other, they should also recognize that there are no off-the-shelf solutions to complex regulatory challenges. Governments need to take the time to understand and consider actions that are consistent with international human rights obligations and appropriate and proportionate for their jurisdiction.

Although it is clear that ICT companies have responsibilities and important roles to play in addressing online harms, lawmakers should resist the temptation to shift all legal liability from those generating illegal content to intermediaries. Not only can this misalign company priorities, incentivizing invasive monitoring and over-removal of content, it often does little to address the underlying drivers of harmful content and conduct.

Laws and regulations governing the ICT sector should also be targeted and narrowly framed. Lawmakers should pay careful attention to the ways laws and regulations will

impact companies with different business models, seeking to foster a diversity of digital services and avoid raising barriers to entry.

For all of these reasons, when the decision is made to regulate, governments should build strong transparency, remedy, and accountability measures into their efforts. Such measures allow policymakers and other relevant stakeholders to understand if content regulations are working as intended, including assessing the activities and effectiveness of unelected oversight or enforcement bodies. Where experience demonstrates that content regulation is not working as intended, governments must recognize and expeditiously rectify any issues that emerge.
CONTENT REGULATION AND HUMAN RIGHTS:

treaty — and many of its progeny were developed before the advent of mobile telephony and the Internet, their respective provisions on freedom of expression all share language emphasizing that this right must apply “through any media”

DQGɊUHJDUGOHVVRIIURQWLHUVȋ7KH81+XPDQ5LJKWV&RPPLWWHHKDVVLQFHFODULȴHG

that, under the International Covenant on Civil and Political Rights (ICCPR), “[a]ny restrictions on the operation of websites, blogs or any other internet-based, electronic or other such information dissemination system, including systems to support such communication, such as internet service providers or search engines, are only permissible to the extent that they are compatible with [Article 19] paragraph 3.”8

More recently, the UN Guiding Principles on Business and Human Rights (“UNGPs”) stipulate that, “[i]n meeting their duty to protect [human rights], states should . . . [e]nsure that . . . laws and policies governing the creation and ongoing operation of business enterprises . . . do not constrain but enable business respect for human rights.”9 In addition, some states have articulated additional commitments regarding the ways in which they will protect digital rights.10

Article 19(3) of the ICCPR sets out a framework describing the limited circumstances in which states may legitimately restrict freedom of expression. This framework is replicated, with some distinctions, across a variety of international and regional treaties. The framework consists of three interrelated principles:

LEGALITY

• Law/rule-making should be done openly, in a participatory manner that allows for diverse and expert inputs, based on empirical analysis, and accompanied by impact assessments.
• To the extent substantial rulemaking authority and discretion is delegated to independent bodies, create robust oversight and accountability mechanisms to ensure that such bodies act pursuant to the public interest and consistent with international obligations.
• Ensure public laws are “formulated with sufficient precision to enable an individual to regulate his or her conduct accordingly.”
• Approaches that establish clear limiting criteria and leave the determination of when those criteria are met to a judge are most appropriate.
• Clearly and precisely define what is prohibited, as well as who can be held responsible for failing to enforce the prohibition.
• Set clear expectations for responsible company action with regard to reports of illegal content.
• Ensure the law requires transparency, oversight, and remedy, so as to avoid “confer[ring] unfettered discretion for the restriction of freedom of expression on those charged with its execution.”

LEGITIMACY

• Ensure that content that is prohibited falls within one of the enumerated “legitimate purposes” in ICCPR Art. 19(3).
• Ensure that controversial and offensive content is not prohibited simply because it makes certain audiences uncomfortable.
• Ensure that content that is allowed in analog contexts is also permitted in digital form.
NECESSITY

- Provide empirical support and argumentative clarity to establish “a direct and immediate connection between the expression and the threat.”
- Conduct careful, public, participatory deliberation to ensure laws are appropriate to achieve their protective function, are the least intrusive instrument amongst those which might achieve their protective function, and are proportionate to the interest to be protected.
- Carefully consider which types of private services at which layers in the technology stack are most appropriately positioned to address the specific concern(s) at issue, focusing efforts on where the most significant risks/impacts occur and can be most effectively addressed.
- Accommodate a diverse range of business models and capacities. Consider how requirements may impact start-ups and smaller entities, as well as any unintended impacts they could have on competition policy.
- Provide clear guidance as to the precise characteristics of content and circumstances that require prompt or significant action.
- Articulate standards for appropriate content moderation based on traditional rule-of-law concepts such as transparency, due process, and remedy.
- Allow for variation and experimentation in approach, including “quarantining” and “downranking” of content. Provide means to guard against intentional misuse and unintentional consequences of content removal measures, including appeal and remedy mechanisms.
- Require courts to adjudicate illegal content and set clear expectations for intermediaries, focusing oversight on assisting compliance and identifying systemic failures.
- Ensure robust remedial mechanisms for users whose content is restricted in order to avoid incentivizing self-censorship and over-removal. Build periodic reviews or reauthorizations into the law, ensuring that it remains relevant and consistent with evolving norms and technologies.

PRIVACY

- Think creatively about how to facilitate accountability for those who violate the law while continuing to strengthen privacy protections for all.
- Recognize that anonymity and pseudo-anonymity can help vulnerable users protect themselves from harassment.
- Recognize the value of strong encryption in protecting users, ICT services, and the ICT ecosystem.
- Ensure that authorities meet due process obligations and evidentiary thresholds before requesting sensitive user data.
